InfraRed Keychain Camera HOW TO BUILD

Posted by crystalcross - 09 Oct 2011 16:53

This is a first draft (very rough) of the How to convert a 808 Keychain camera to Infrared video.

I kept it REAL, all did not go well during the process but I left the footage in there. It can get difficult depending on how much glue they used when they created the camera. Unfortunately you won't know that until you get one. A hint, the high resolution HD versions use considerably more glue and are not always possible to convert. The standard DV quality 640x480 or 720x480 are much more forgiving and usually have less glue on the lens cap.

If you try to do it and run into problems, I would be happy to help. Or I sell the cameras as well, but I'm just as happy to help you make the conversion yoursself.
