On the morning of the last day 18, the beloved teacher has died Sinesio Darnell Huerta. Undoubtedly, today is a sad day for all the family mystery that has lost not only one of the greatest masters in the field of parapsychological research, but also a dear person and loved by us all. From here, members of the Alpha Group and we pay our humble homage and send our deepest condolences to his family and friends. Rest in Peace Professor.

Darnell was industrial chemical, microbiology technician diploma in chemistry and olive oil. In addition, a member of merits of different scientific organizations and was a speaker of several international conferences of industrial chemistry.

In his work as researcher in the field of parapsychology has been a member of the technical committee of the European Congress of Parapsychology. He began his research in parapsychology for many years, along which has published books and several papers in professional journals.

Darnell supported the formula of the "theory of the interface" to explain the phenomenon of EVP, which espouses the idea that life on earth from one-dimensional, and a spiritual, etheric or astral, had to be a buffer zone, an interface between the earthly and the spiritual. The investigator Raymond A. Moody, Jr., in his books on "life after life," says stories of his interviewees, which describes a "gray area" in which "trans-beings," as called H. Senkowski, roam indifferent, ignoring its own "there," always heads down and disoriented. Area corresponding to the band contact call "forgotten area".

The interface may consist of different levels with states of consciousness or awareness also different, as it seems to demonstrate the safety of some responses at different frequencies.
