ghost hunt mar. 30, 2012

Posted by norman glasser - 31 Mar 2012 18:54

---

the following pictures were taken in the evening where we had partial natural lighting and one with a infrared camera at night. these are not are best pictures but ones I will share. Yes it was personnel and up close. regular digital camera captured spirits in orb form which will be used as a comparison to study if all orbs are physical in nature. at a later up date we will compare. Note NO flash was used plus on tripod

Norman,

I like the 2nd picture. Especially near the top left where you can see a clear imprint of some form of logo or pattern, very crisp and clear.

What I would love to see is for you to do a IR video of one of your sessions. And then compare the results to the still images.

Also, is there a way to turn off the IR source on that IR camera. I'm thinking it may be acting as a "Flash" and saturating the picture with a bit too much IR. I would much prefer to see a separate IR source from a side angle. IR flashlights are fairly cheap and would make an excellent replacement light source.

Keep it up my friend!
